---

## PROFESSIONAL SUMMARY

---

Backend developer skilled in Node.js, Express.js, and MongoDB, passionate about building scalable and secure web applications. Experienced in designing efficient APIs, optimizing database performance, and implementing robust authentication systems. Currently exploring microservices architecture and cloud deployment to enhance application scalability. Eager to apply problem-solving skills and collaborate with a dynamic development team to create high-performance backend solutions.

## WORK EXPERIENCE

---

### Freelancing Backend Engineer | Self-Employed

September 2024 – Present

- Developed and deployed scalable RESTful APIs using Node.js, Express.js, and MongoDB, ensuring high performance and maintainability.
- Designed and implemented secure authentication and authorization systems using JWT and bcrypt, improving data protection.
- Integrated third-party APIs (e.g., payment gateways, email services, cloud storage) to enhance application functionality.
- Created and optimized database schemas to improve query performance and maintain data integrity.
- Implemented caching strategies using Redis to boost API response times and reduce server load.
- Deployed applications on cloud platforms such as AWS, DigitalOcean, and Vercel for improved scalability and reliability.
- Wrote clean, well-documented code following best practices to enhance maintainability and collaboration.
- Worked closely with clients and stakeholders to gather requirements and deliver custom backend solutions aligned with business needs.

- Analyzed SEO and marketing data, applying data-driven strategies (similar to backend data handling).
- Optimized marketing funnels, improving conversion rates by 10%.
- Conducted market research to identify target audiences and improve campaign performance.
- Used data analytics tools to track and measure engagement, improving decision-making strategies.

**Loan Collection Representative | Okash,**

**June 2022 - October 2022**

- Used CRM tools to manage customer interactions.
- Improved data tracking efficiency by 5%, reducing overdue loan cases.
- Communicated effectively with customers to negotiate repayment plans, improving collection rates.
- Maintained detailed records of customer interactions, ensuring accurate data entry and reporting.

## PROJECTS

---

### 1. tickDone

Description: An interactive command-line interface (CLI) application for efficient task management.

Technologies: Node.js, Express.js, MongoDB, JWT (Authentication), Git, GitHub, Postman, Render

**Features:**

- Developed a CLI-based task manager supporting task creation, filtering, sorting, and subtasks.
- Implemented user authentication with JWT for secure access.
- Integrated notification features to enhance user engagement.
- Optimized performance to handle large task lists efficiently.

Github: <https://github.com/arnite/tickDone>

**2. Capwise**

Description: An intermediate investment broker website API for managing investments, transactions, and payment processing.

Technologies: Node.js, Express.js, MongoDB (SQL integration planned), JWT (Authentication), Stripe (Payment Processing), Git, GitHub, Postman, Render

**Features:**

- Built a secure API for managing investor and broker roles with role-based access control.
- Implemented investment management and transaction tracking.
- Integrated Stripe for secure payment processing.
- Designed a scalable architecture to accommodate future SQL database integration.

Github: <https://github.com/arnite/capWise>

**3. Pickmart**

Description: A RESTful API for an e-commerce platform, providing core functionalities for seamless shopping experiences.

Technologies: Node.js, Express.js, MongoDB, JWT (Authentication), Stripe (Payment Processing), Git, GitHub, Postman, Render

**Features:**

- Implemented secure user authentication and role-based access control using JWT.
- Developed APIs for product management, cart operations, and order processing.
- Integrated Stripe for payment processing, ensuring secure transactions.
- Deployed using Render.

Github: <https://github.com/arnite/pickMart>

**4. Eventify**

Description: A system for users to book event tickets, including support for recurring events.

Technologies: Node.js, Express.js, MongoDB

**Features:**

- Developing event creation, ticket booking, and recurring event support functionality.
- Adding user management and payment gateway integration.
- Exploring microservices architecture for better scalability.

Github: <https://github.com/arnite/eventify>

EDUCATION

---

Bachelor of Technology, Petroleum Engineering,

2018 - 2024

Federal University of Technology Owerri—Imo State, Nigeria

CERTIFICATIONS & LICENSES

---

The complete Javascript course 2024 Bootcamp

2024

Node.js, Express, MongoDB Bootcamp

2024

TechworldWithNana - DevOps Bootcamp

2025

SKILLS

---

- Programming Languages: JavaScript
- Backend Frameworks: Node.js, Express.js
- Databases: MongoDB, MySQL, PostgreSQL
- API Development: RESTful APIs, GraphQL, WebSockets
- Authentication & Security: JWT, bcrypt, Passport.js
- Cloud & DevOps: Docker
- Microservices & Architecture: Monolithic & Microservices Design, Message Queues (RabbitMQ, Kafka)
- Testing & Debugging: Jest, Mocha, Postman, Unit Testing
- Performance Optimization: Database Indexing, Query Optimization, Caching (Redis)

## TOOLS

---

- Version Control: Git, GitHub
- Development & Debugging: Postman, Chrome DevTools
- CI/CD & Deployment: Docker, Kubernetes, Jenkins, Heroku, Render
- Project Management: Jira, Trello, Notion
- Code Collaboration: VS Code, GitHub, Copilot
